Most products are available in special lengths or different galvanized coatings on request. We are continually adding new product lines and updating our current products. If you do not find the product you are looking for in this catalog, please call our knowledgeable and friendly sales staff, who will be glad to discuss preparing a custom order for you. We are committed to serving our customers regardless of what their wire needs might be.

## Please note: All weights are approximate.

We are committed to providing the highest-quality products at the most competitive prices possible. We are driven to support our customers and the wire industry with unsurpassed standards of service and reliablility. With these goals and commitments, we maintain an environment that promotes long-term growth for our valued customers and the industry.

OK Brand Products are proudly made in the United States of America.

## (0)TB PRODUG్ STx

## Premium

OK Brand Premium Fencing products are made to meet or exceed the highest standards in the industry which include all ASTM specifications. From the zinc
 coating weight to the wire tensile, every stage is monitored to provide the best fencing product on the market today and is the staple of OK Brand fencing quality.

OK Brand Premium Products marked with the ASTM Logo indicate that the product is manufactured to meet or exceed the highest industry standards. All OK Brand Products are of the highest quality; however, ASTM sets different standards for certain products. Products with the ASTM logo are capable of being certified by Oklahoma Steel and Wire/Iowa Steel and Wire; and will pass state and federal specification in accordance with ASTM specifications.

## Select

Quality is the number one priority in all OK Brand Fencing Products. Our Select Fencing Products maintain that standard as well, standing up to the rigorous day-today use on working farms and ranches. Trimming up the edges without compromising quality makes the Select Products a mainstay of our fencing products.

With quality and durability being our focus, many select products possess some of the same features as our premium products, such as wire size or zinc coating weight. However, these products are not produced to meet ASTM specifications. Therefore, Oklahoma Steel and Wire/Iowa Steel and Wire make no claims to passing ASTM specification and will not certify the Select product as such.

## Commercial

If your needs are quality as well as economy, OK Brand Commercial is the answer. A lighter gauge wire, along with a commerical galvanized coating may put OK Brand Commercial in a different class than the others. The quality and dependability allow it to carry the OK Brand name.

Commercial products pass our strict quality control testing and adhere to our high industry standards. However they will not meet ASTM standards and Oklahoma Steel and Wire / Iowa Steel and Wire will not certify Commercial products to meet the published standard.

## Galvanized Before Welding

Before welding, wires are galvanized using the tight wipe system, which produces a smooth uniform finish. This eliminates sharp burrs or icicles, preventing undue injury to animals or people. Galvanizing before welding combines safety with dependable strength and lasting durability.

## Versi-tail

An added feature to a variety of OK Brand Products is Versi-Tail, which is the addition of a $12^{\prime \prime}$ tail to the beginning of each roll and a $6^{\prime \prime}$ tail to each end.
 Versi-Tail allows for easier installation and eliminates the need to remove cross-wire staples providing enough wire for tying corners or splicing rolls. This feature is currently used on all Max-Tight and Max-Loc Products.

OK Brand builds quality fencing using three types of knots.

The OK Brand Hinge-Joint Knot has a joint that acts as a hinge, allowing the fence to spring back into shape and give under pressure. This knot allows for easy installation and provides strength and flexibility.

Fencing that uses the OK Brand Hinge-Joint Knot are our Field Fence, Sheep and Goat Fence, and Game Fence.

The OK Brand Max-Tight Knot is a square knot that gives extra vertical strength to withstand impact by large animals. It also allows flexibility when installing over hilly terrain. This knot is used in our Max-Tight Horse Fence and Field Fence Products.

The OK Brand Max-Loc Knot uses fixed knot technology, originally developed in New Zealand for raising deer. This technology introduces a third wire to tie the continuous vertical and horizontal wires together. The fixed knot gives you maximum hold on the vertical and horizontal wires. This design securely locks the line wire and stay wires together, giving you the strength you need. Vertical stay wires are one piece and cannot unwind under pressure. Inherent flexibility of this design allows the fence to conform to terrain.

Used in Game Fence and some Field Fence configurations.

## 

OK Brand galvanizes all wire before welding, which provides a smooth finish on each line wire and eliminates sharp burrs. The wire is welded to form squares or rectangles - vertical or horizontal. Welded joints are used on:

- Utility Panels
- Cattle Panels
- Horse Panels
- Goat Panels
- Ranch Panels
- Sheep Panels
- Bull Panel

Suanino mien cavole

OK Brand offers fencing in various gauges, from heavy-duty to lightweight. The higher the number, the smaller the wire.

See diagram at right for the size of each gauge.

Please note: All product weights are approximate.

## 

OK Brand Max 50 Fence Panels have been specially designed to maximize your savings, freight, and space. Every panel carries the same quality and workmanship as our welded fence panels. They are manufactured with our galvanized-before-welding process, which allows for a smooth, uniform finish and prevents undue injury to you or your animals. This product line allows side-by-side stacking, thus reducing the height, providing safer and easier off-loading, and reducing potential strap damage to the material. Max 50 allows 150 more panels per load than a regular fence panel and increases the value of your freight dollar up to 12 percent.

## B0K

When your challenge is the most unruly of bulls, OK Brand has the solution. Our Bull Panel is the heaviest panel we manufacture. Manufactured with our galvanized-before-welding process, the $5^{\prime} \times 16^{\prime}$ panel combines a $6^{\prime \prime} \times 6^{\prime \prime}$
 spacing and a 1-gauge galvanized wire. The 5' height, reduces the likelihood of the animal going over the top, while the heavy gauge wire and 6 " spacing prevents them from going through the middle. The 16 ' lengths allow for even post placement at $8^{\prime}$ which increases the strength of the confinement area. This panel is built with one thing in mind: keeping your bull where you put him!

## STHER

Building pens for those prized show sheep or building a perimeter fence to hold in a herd of goats, OK Brand Sheep and Goat Panels are the choice for you. With spacing at the bottom starting at

Sheep \& Goat
 durability. This Select panel stands up to everyday use and the galvanized-before-welding process eliminates sharp burrs that may cause injury to your show animal.

## 

Keeping up with your most trusted four-legged friend can sometimes be challenging. Helping you to meet this demand, OK Brand offers you an 8-gauge galvanized-before-welding Kennel Panel. Manufactured at a height of $6^{\prime}$ to contain even the most feisty canine with a 12 ' length to accommodate most standard kennel configurations.

## 

OK Brand Cattle Panels are built to handle the toughest ranching conditions, but versatile enough to be used for lawn and garden projects.

- Our Select Cattle Panel gives you the same graduated spacing as our popular MAX 50-10 panel, utilizing a combination of a 5 -gauge horizontal wire, a 4 -gauge vertical wire and the galvanized-before-welding process.
- Our Economy Cattle Panel keeps our same proven spacing combined with a lighter more economic line wire and cross wire, while still providing a durable product for your fencing needs.

Rinnci limice

Perhaps the most economical yet durable fencing is our OK Brand Ranch Fence, which is ideal for almost any fencing project. This $5^{\prime} \times 100^{\prime}$ panel has a 6-gauge galvanized wire to provide the strength you need to meet all your challenges.

## (1)

No matter what your animal containment needs are, OK Brand has the solution. These utility fence panels have multiple uses on farms as well as residences. All panels are manufactured using the galvanized-before-welding process, which gives a smooth finish to each line wire and eliminates sharp burrs. A wide variety of spacing configurations, along with several lengths in either 4-gauge or 6-gauge, makes these panels extremely versatile for many applications, including hog pens, hog traps, dog pens, and many other farm and residential uses.

## Homse Pinn Ms

When the safety of your horses is important, OK Brand has the panel for you. These OK Brand horse panels offer safety features that will meet your expectations and provide dependable strength and lasting durability. Sharp burrs and edges are eliminated with our galvanized-before-welding process. This process allows for a smooth, uniform finish on the panels to prevent undue injury to your prized animal. The $4^{\prime \prime} \times 2^{\prime \prime}$ wire spacing keeps the animal confined to its intended space and keeps unwanted animals or predators out. The tight spacing helps reduce the possibility of injury due to pawing or reaching through the fence. This fencing is available in a variety of lengths and heights in either 4-gauge or 6-gauge. Specifically designed for safety, OK Brand Horse Panels have a variety of uses, which include dividing a stall, fencing a pasture, or constructing a dog pen.

Whether it's our 2-point or 4-point barbed wire, the durability and strength will impress every user of our wire. We have some of the sharpest barbs in
 the industry, repelling the most stubborn of animals. Our OK Brand Premium Barbed Wire has a Class I coating that meets or exceeds ASTM A-121 specifications with sharp, evenly spaced barbs. OK Brand Western Edition offers the same qualities as our Premium Barbed Wire with the feature of flat barbs. Our OK Brand Select and Texas Edition Flat Barb give you the Class I coating, but lessens the expense by spreading the barbs by $1^{\prime \prime}$. OK Brand Premium and Select Barbed Wire have zero splices per roll with minimum 950 lb . breaking strength.
 Our OK Brand commercial Barbed Wire is economically priced using commercial galvanized coating. All styles are packaged on non-collapsible reels with easy handle, placed on wooden pallets, and tarpped for protection against the elements.

OK Brand barbed wire products come with an easy handle. This handle collapses inside the spool when the wire is stacked. To use, you simply pick up the handle and it securely hooks the spool when you are ready to lift the product.

## B

Looking for something to do the job without the severity of barbed wire? OK Brand Barbless Wire has a variety of uses, from fencing a pasture full of horses to putting a tension wire at the bottom of our Field Fence. Barbless Wire is designed to contain thinner-skinned animals that do not need the extra persuasion you get from our barbed products. OK Brand Barbless Wire is manufactured with a Class I coating that meets or exceeds ASTM A-121 specifications.

## 

OK Brand Field Fence (woven-wire) is manufactured in a wide variety of heights and styles and feature a graduated spacing that starts with small openings at the bottom, helping to prevent entry by small animals. The Hinge-Joint Knot allows the fencing to give under pressure and spring back into shape. It also expands or contracts under changing weather, giving flexibility and added strength. This quality fencing ensures a solid construction over any terrain. Our field fence is designed using a variety of spacing configurations to accommodate horses, cattle, hogs, and other large animals.

- OK Brand Premium Field Fence is produced with a Class I or Class III zinc coating in 9, 11, and 12.5-gauge. Heights range from $26^{\prime \prime}$ to $56^{\prime \prime}$, with a stay opening of either $6^{\prime \prime}$ or $12^{\prime \prime}$ and a length of $330^{\prime}$ ( 20 rods). Uniform strength provides the best stretching possible and the range of sizes will meet all your fencing needs.
- OK Brand Select Field Fence offers the same tensile requirements as our Premium Fence. It uses a commercial zinc coating and comes in 330' rolls. This quality field fence is a great value for your fencing needs.
- OK Brand Commercial Fence is available in the same variety of heights as our other products, with a $6^{\prime \prime}$ or $12^{\prime \prime}$ stay opening, in $330^{\prime}$ rolls. The Commercial Fence is made with a 14-gauge commercial coated galvanized wire, which makes it a great economical fence for your lighter fencing needs.

OK Brand Max-Tight Field Fence is manufactured using the Max-Tight Knot. Just like our OK Brand Hinge lock it is manufactured in a wide selection of heights and styles featuring a graduated spacing that starts with small openings at the bottom which helps prevent entry from small animals. The Max-Tight knot provides extra vertical strength to withstand impact from large animals while flexible enough for installation over hilly terrain. Our field fence is designed using a variety of spacing configurations to accommodate horses, cattle, hogs and other large animals.

As with all OK Brand Max tight products our field fence has the added benefit of our unique "Versi-Tail" feature. This feature allows for easier installation by adding a 12" tail at the beginning of each roll and a $6^{\prime \prime}$ tail at each end. This feature eliminates the need to remove cross-wire staples to allow enough wire for tying corners or splicing rolls.

OK Brand Premium Max-Tight Field Fence is available in Class I or Class III Zinc Coating.

## WR:

Designed for the serious horseman, the Max-Tight Horse Fence is manufactured using the Max-Tight Horse Safe Knot. This square knot provides extra vertical strength to withstand impact from large animals. It also allows flexibility for installation on hilly terrain. A unique feature to Max-Tight Horse Fence is the Versi-Tail. This allows for easier splicing of rolls and anchoring to corners by adding a $12^{\prime \prime}$ tail at the beginning of each roll and a $6 \prime$ tail at the end. Versi-Tail allows for faster installation by eliminating the need to remove cross-wire staples to allow enough tail for tying to corners or splicing rolls. Class I galvanized horse fence resists corrosion which results in a longer fence life. Continuous vertical and horizontal wires, wrapped in a horse-safe knot with a third wire, provides the strength and rigidity as well as the safety needed for your prized animals.

OK Brand Max-Loc is another great alternative for your fencing needs. This Class III High-Tensile Fencing offers you the strength and durability you have come to expect in all OK Brand products. Max-Loc Fencing uses fixed knot technology, originally developed in New Zealand for raising deer. This technology introduces a third wire to tie the continuous vertical and horizontal wires together. The fixed knot gives you maximum hold on the vertical and horizontal wires, locking them in place. The high tensile 12.5-gauge wire allows for minimal stretching during installation, with the Class III coating providing protection in any climate or temperature. Making installation even easier the Versi-Tail feature is added to all MaxLoc products. This unique feature allow for easier splicing of the rolls and anchoring to corner posts by adding a 12 " tail at the beginning of each roll and a $6^{\prime \prime}$ tail at each end.

Available in game fence and field fence styles.

OK Brand High－Tensile Field Fence is manufactured with high－ carbon Class III galvanized wire to give you strength as well as climate protection no matter where you are．Because it is designed with a high－tensile horizontal wire， minimal stretching on installation is required．Using our Hinge－Joint Knot allows the fencing to give under pressure and spring back
 into shape．

From fencing a garden to fencing ostriches, this fence is easily installed because of the wire's ability to be cut and bent with minimum stress. Welded Wire can be fabricated to meet your specific needs and is durable and dependable for everyday use. Welded Wire works great for a temporary situation because it is easy to remove, re-roll, and store for later use.

## Hzoce Mraics

OK Brand Fence Stays help maintain stability and uniformity in fencing when used with barbed wire or a combination of barbed wire and field fence. Available in 9.5-gauge Class I galvanized coated wire or an economical 10-gauge commercial grade. Fence stays will reduce fencing costs by allowing the use of fewer fence posts.

OK Brand Electric Fence Wire is manufactured with an extremely strong, smooth wire to resist breakage over long distances. Our Electric Fence Wire comes in spools of $12.5,14$, and 17 -gauge galvanized wire in quarter-mile and half-mile lengths. Electric Fence is ideal for added security on an existing fence or as a low-cost temporary or permanent fencing alternative.

## Bancic mors

OK Brand Premium Baler Wire is manufactured from the highest quality 14.5 -gauge annealed wire and meets ASAE standards. Baler Wire is packaged in rolls of minimum 6,500 linear feet. OK Brand Premium Baler Wire is built for dependability, from the quality of the wire to the strength of the box. A wellmaintained level winding system and high grade lubricants allow for a tangle-free payoff and rust resistant wire. Banded with a nylon tape and the starting end marked, this quality wire is placed in a specially designed wax-coated box. The wax-coating prevents the wire's lubricant from bleeding through, which helps maintain the boxes structural shape and durability. A perforated center knock-out is placed and sized for optimum payoff. The box dimensions are designed to accommodate most balers.

## YRPosus

High quality T-Post are sourced from various t-post manufactures, with sturdy anchor plates to assure stability in all soil types. In-stock lengths include $6^{\prime}, 6^{\prime} 6^{\prime \prime}$, and $10^{\prime}$.

## ThPOSt Gbre

Our T-Post Clips were designed so that the ends of the fasteners provide tension when installed, keeping the line wire tight against the post. Just a half-turn around the wire is all it takes for easy installation. These high-quality clips are universal, fitting 1.25 and 1.33 -pound weight T-Posts. They are packaged in quantities of 1,000 clips per bag and sub-packaged in 20 bags of 50 clips. Pallets contain 100 bags, which weigh approximately 18 lbs. each.

## 

Complement your line by adding one of our economical 16-pound T-Post Drivers, manufactured to stand up to the stresses of a long day of fence building.

## TRTMct MquMrlzs

No matter what OK Brand product you need to securely fasten to wood posts, OK Brand barbed fence staples will do the job. OK Brand staples are slice cut and have plenty of holding power. The sharp points make them easy to drive into the wood and the barbs hold them
 securely in place. Made with high quality commercial and Class 3 galvanized wire coatings, this double barbed 8 gauge staple is made to do the job right the first time and for a long time.

Available in 8\# and 50\# buckets.

## GMETRE

Gripple is renowned for providing innovative, cost-effective solutions for fencing applications. Gripple products work with a wide variety of mild and tensile fencing wires, across barbed and plain fencing types and on anything from stock to electric fencing, replacing traditional methods and generating time and labor savings.

The Gripple Plus range allows for joining, tensioning and repairing of wires, eliminating the need to tie and knot wires and ensuring the integral strength of the fence is never compromised.

The T-Clip is a revolutionary solution for securing a fence at an end post, particularly useful on horse and deer fences where space is tight and there are multiple line wires.

## 勿気田

With time and money savings advantages，reduced labor cost， faster placement and increased production，OK Brand Welded Wire Reinforcement is your concrete reinforcement solution．

The OK Brand Spreader Bar has been uniquely designed to assist customers in unloading $20^{\prime}$ panels without causing damage. The spreader bar easily attaches to any forklift. The use of our spreader bar has been proven an efficient method for unloading and can reduce damage to the product.

Steel wire longevity depends on the type and thickness of protective coating around the wire. Zinc is commonly used to cover (galvanize) steel wire to protect it from rusting. There are several ways of applying zinc to steel wire, and some are claimed to be superior to others. However, results of testing by the American Society of Testing and Materials (ASTM) show no practical difference among galvanization methods.

Zinc coatings are measured in ounces of zinc per square foot of wire surface. The more zinc per square foot, the more years of wire use before rusting starts. The ASTM has established "classes" of zinc coatings for steel wire based on the number of years that galvanizing delays wire rusting under different climate conditions (Table 1). Class I has the lightest zinc coating and Class III has the heaviest. Machinery, livestock, and fire can damage the zinc coating, which results in wire that rusts sooner than undamaged wire. Steel wire can have less than a Class I coating. This is often referred to as "regular" galvanizing. Many local dealers stock steel wire with either regular or Class I coating.

Table 1. Approximate years of protection given steel wire by Class I and Class III galvanizing.

## TచTM

Good fencing protects and confines valuable livestock by presenting barriers to restrict animal movement. Barriers can be physical, psychological, or a combination of both. Physical barriers consist of enough materials of sufficient strength to prevent or discourage animals from going over, under, or through fences. Psychological barriers involve inflicting pain to discourage animals from challenging a physical barrier of inferior strength. Traditional livestock fencing materials have included barbed, woven, mesh, and electrified wire or combinations of these materials. Board fences have also been popular. These conventional materials are still widely used and make excellent fences if properly constructed. However, new materials such as high-tensile wire should also be considered when selecting fencing types. The type of fencing needed for livestock confinement depends on several factors, including animal species, age, breed, and production system. Beef cattle on a controlled grazing system have different fencing needs than horses on recreational pasture. Permanent boundary or division fences require different fencing materials than fences for temporary paddocks. Fencing type and materials influence the cost, lifespan, and function of the fencing system.

## G央난옹

Barbed wire and woven-wire fences have traditionally been used for cattle. Four-strand or five-strand barbed wire fences are adequate for cattle. Heavyweight and extra-heavyweight wovenwire fences with one or more strands of barbed wire above the fence are excellent for cattle. Fence height should be at least 39 inches. Heavy wire panel fences are highly recommended for cattle-handling facilities. Fence height should be at least 60 inches to prevent escape. Fences should also be clearly visible to reduce stress on the animal and to enhance movement through the facility.

## \&TIETP MND Congs

Barbed wire fences have typically been used for sheep and goats. However, these fences are not recommended for sheep, since barbs pull the fleece. Furthermore, barbed wire fences do not effectively confine goats if moderate grazing pressure is applied to the fenced-in area. Heavyweight or extra-heavyweight woven-wire fences are excellent for nonhorned sheep and goats. Fence height should be at least 39 inches to prevent animals from climbing over the fence, and may need to be higher depending on the breed to be confined. Mesh wire fences also make excellent fences for non-horned sheep and goats. Temporary fencing is not recommended for sheep or goats, since they can easily escape.

Barbed (standard and suspension) wire and cable fences are not effective for swine confinement. Woven-wire fences with one or more strands of barbed wire (placed along the ground to discourage rooting) provide good hog control. Medium and heavyweight woven-wire fences with small openings are excellent for restraining swine. Maximum fence height should be 54 inches. Fences built close to the ground prevent hogs from escaping by rooting underneath the fence.

## HOBSEE

Visibility is the most important characteristic of horse fencing. Poorly visible fences such as high-tensile and barbed wire fences should not be used with horses; the animals could incur severe injuries (e.g., deep lacerations or broken bones) if they become entangled in fence wires. Max-Tight Horse Fence and OK Brand Horse Panels are highly recommended for horses. Woven-wire fence with openings of 4 inches or more should not be used, since legs can become trapped in the openings. Woven-wire fencing with openings less than 4 inches are suitable for horses if a single 1-inch-by-6-inch board is placed at the top of the fence to increase visibility.
