## PRIMETHERM® TREATMENT

All Plantation Prestige panels receive the PRIMETHERM® Coating, our industry leading finish for reliable and worry-free outdoor steel products. The panels go through 8 specifically designed stages of product cleansing and application, ensuring the highest quality of output to meet the most commanding demands. The PRIMETHERM® Coating revolves on the philosophy of being as well prepared before the final layer is applied. Our first 5 stages are dedicated to the cleaning and removal of impurities that could mar the final product. After cleaning, the panels are coated strictly with AkzoNoble Interpon Polyester coating. Beautiful finishes, that never grow old on the eyes. Resistant protection, to insure the buyer saves on repairs. Every Plantation Prestige steel panel is treated with respect, which is our respect to the buyer. We welcome you to be part of the Plantation Prestige family, where we truly are, a timeless classic.
